To: SueLynn Dignard, Project Manager, SFWMD

From: Alan Hall, Project Manager, TBE

Subject: HEC-RAS Information from Jacksonville USACE

Contact Method: email

Today I received from Mr. Trent Ferguson of the Jacksonville District, U.S. Army Corps of Engineers, information from their studies to design the western facilities for STA-1E and the S-319 Pumping Station. Specifically:

This data should provide us with a good benchmark set of input and output information for the western reaches of the canal. We will be able to use this to verify and calibrate the model when its constructed.

This response from the Corps was specifically in reply to your request to Paul Moczynski which we discussed. I had been working with the staff in Jacksonville from before the

contract was even awarded to get them to begin assembling this information for us in time for the study. It's good to see that this level of interagency cooperation between SFWMD and the Corps continues.

I have forwarded this information to Dr. Panigrahi, our modeling contractor, for his use on this project.
